

Reported Methyl Bromide Consumption in North America, 1991 - 1999 (MT)

Country	Historical							Future Designated Allowable				
	Baseline	1991	1995	1996	1997	1998	1999	2001	2002	2003	2005	2015
United States	25,528	25,528	22,422	21,533	20,772	21,087	17,425	12,764		7,658	0	0
Mexico	1,885	397	2,397	1,251	1,878	2,012	1,399		1,885		1,508	0
Canada	246	246	125	133	144	112	123	123		74	0	0
Total		26,171	24,944	22,917	22,794	23,212	18,947					0

Note: Shaded rows indicate Article 5 (Developing) Countries.

Sources: EPA 2001; Oberthür 2000, 2001; Ozone Secretariat 2001; UNEP 1998.

Totals may not sum due to independent rounding.

- The United States accounted for approximately 92 percent of North American total methyl bromide consumption in 1999.
- Mexico qualifies as a party operating under the Montreal Protocol's paragraph 1 of Article 5 allowing a consumption increase until 2002, after which consumption must not be greater than the baseline amount of 1,885 MT (defined as the average of 1995-1998 levels).
- The Non-Article 5 countries in North America, the United States and Canada, must reach 100 percent reduction of consumption by 2005; Mexico (an Article 5 country) must reach phase-out by 2015.
